

.pdf){width="0.6\linewidth"} The paper is organized as follows. In Section \[sec:models\], we describe the two sub-models that we consider in this study: 1) the Weibull hazard model, and 2) the log-normal survival function. Section \[sec:datasets\] describes the breast cancer survival data and the lung cancer data. In Section \[sec:estimation\], we describe the estimation method that we have used.

In Section \[sec:results\], we report the results of the study. Finally, Section \[sec:discussion\] concludes with some discussion on the study. The Weibull hazard model {#sec:models}

===== In this section, we describe the Weibull hazard model and use it to develop the proposed method of estimation of the  $p_{\text{surv}}$  parameter. The Weibull hazard model is a class of semi-parametric models that has been widely used in many application areas, such as reliability analysis and survival analysis. The Weibull hazard model has been used to model the survival times of many diseases such as diabetes, HIV, hepatitis, breast cancer, lung cancer, leukemia and others [Zhou\_Genton\_2010]. Let  $T_i$  be the random variable of the  $i$ th failure time with unknown probability density function  $f(t)$  and survival function  $S(t)$ . The hazard function for the  $i$ th failure time  $t_i$  is defined as  $\lambda_i(t)$  \label{eq:hazard}

$\lambda_i(t) = \frac{f(t_i)}{S(t_i)}$ , \end{aligned} where the hazard rate  $\lambda_i(t)$  is the conditional probability of the  $i$ th failure time at  $t$ , given that the  $i$ th failure time is  $t_i$ . Let  $T_i$  be the random variable of the  $i$ th survival time with probability density function  $f(t)$  and survival function  $S(t)$ . Then, the probability density function of  $T_i$  is given by  $f_i(t) = S(t)\lambda_i(t)$  \begin{aligned} \label{eq:survival}  $f_i(t) = S(t)\lambda_i(t)$ . \end{aligned} The

suwardjono teori ... Das Theory of the  
Enclave is the result of the first-hand  
studies of the geniuses of the early  
twentieth century . The paper presents  
the original investigations of the  
theorists. A comparative synthesis of the  
main theories of space, time and energy  
is also presented. The theory of the  
Enclave is based on the principle of  
space-time duality, which is the basic  
principle of the entire universe. The
