You have to wait for a third party to upload the file. For example, if someone uploads a file named Malware.zip, then you can download and install it using the step 3 in below link. How to install.zip on Android? Some of the tools to check if the file is safe are from VirusTotal or VirusTotal. VirusTotal is not a trusted site. How can I tell if a link leads to a safe site? VirusTotal just uploads the file to VirusTotal servers, which would be added to this site's database. But it is not a trusted site and not safe to rely on. [Clinical and epidemiological study of trichomoniasis in a leprosy hospital]. In the present study the rate of trichomoniasis in the hospital where leprosy patients are treated is estimated to be greater than 30%. In this setting we evaluate the clinical aspects, causes and behaviour of the infection, the transmissibility of the disease and the therapeutic aspects of the trichomoniasis. The leprosy patients were studied and the therapeutic protocol was modified after epidemiological studies. Between September, 1992, and March, 1993, we reviewed the medical records of 202 leprosy patients, 196/202 (96.5%) of whom had evidence of trichomoniasis.
