I've had my MacBook Pro for a few months now, and I'd really like to move to the latest version of OS X. It's not that I don't want to use the beta, I do, but it's already way too buggy for me to use. Unfortunately, Apple is recommending that I upgrade to the latest version, but I'm having problems doing so. Here's what I did: Reinstall OS X. It didn't find my wireless card, and the Mac wouldn't boot. Reinstall OS X. This time, the Mac didn't even recognize the wireless card, and the Mac wouldn't boot. Reinstall OS X. This time, the wireless card still wouldn't be recognized, and the Mac still wouldn't boot. Has anyone else experienced this, or have any idea what I should do?

A: There are a number of steps you need to take before you can upgrade. Backup your data to an external drive Remove all SSDs from your computer except the built-in SSD. Restore your OS to a recovery partition on the built-in SSD using Disk Utility. Restore all your data to your backup using File Manager. Restart your computer. Now you can install Snow Leopard. Alternatively, if you have your own recovery partition, you could upgrade using your external drive instead of using the built-in SSD. A: If you didn't need to reinstall your OS, I would recommend to do a clean install. This is of course assuming that you have the disk from the previous install. You could also try to reinstall using the Recovery partition. Using
