If you are encountering an issue where the sound does not work correctly when playing music, or the audio isn't working at all, go to device manager, right click the audio device icon and select properties.If you are encountering an issue where the sound does not work correctly when playing music, or the audio isn't working at all, go to device manager, right click the audio device icon and select properties. Try installing new driver from there and if that doesnt work, you may need to replace your motherboard drivers as well.
