Figure 1. AutoCAD, 2010. AutoCAD is the backbone of the largest segment of the design and drafting community. More than 80% of the world's leading architectural firms, engineering firms and landscape architecture firms use AutoCAD as a primary design tool, for project-specific drawing creation as well as production of finished construction documents. These firms include large firms with more than 1000 employees, and small firms of a dozen or less employees. Every building or landscape needs to be designed.

Architects, landscape architects, engineers, contractors, and other professionals create drawings and blueprints that allow clients to know what the final product will look like. These professionals do most of their work on computers, and often a client pays for the design work as well. In fact, roughly two-thirds of all drawings are done by professionals in the industry. And, on average, they need to create or revise nearly 20 drawings or plans per year. This places a significant demand on the design process, and on the professionals that make it happen.

Based on a set of assumptions (for instance, that the design of a building is a complex process that can involve as many as seven or eight separate professionals), AutoCAD calculates the total cost of the design process and the cost per drawing (or plan). Cost of AutoCAD: AutoCAD's initial cost may be as high as \$2,000, depending on the features you buy and which AutoCAD product you buy. As a rule, however, the total cost of a license for an enterprise is usually only a small fraction of what it would cost for separate licenses for every user. For instance, an enterprise license for AutoCAD 2013 is only \$1,000, while the same license for a single user costs \$6,000. The total cost of AutoCAD is typically broken down into four categories, as shown in Figure 2. (1) Preparation (2) Design (3) Documentation (4) Support and enhancements Preparation of drawings. This includes CAD and drafting software, CAD and drafting components, CAD and drafting service, and other things you need to get your drawings ready for work. Figure 2. The Cost of AutoCAD. Café Sablier
The Café Sablier is a restaurant, bar and jazz club in the 4th arrondissement of Paris, France. History The café was founded in 1909, by an Italian wine merchant, Ferdinando Fuga (1875-1952), in the now-vanished city of Montmartre. In the 1920s and 1930s, it became a jazz club. The café was renamed to Café Jazz, then became a regular spot for international writers, who included Ernest Hemingway, F. Scott Fitzgerald and Raymond Chandler. The café was closed in 1938. Renamed to Café George V in 1955, the café was closed in 1977, and reopened in 1985 under the current name. From 2000 to 2010, the French singer Serge Gainsbourg performed at the café from 8:30pm to 1:30am every night. In addition, there was a special set of the singer's songs performed on the piano by Alain Jean-Baptiste every night at 9:30pm, which helped to advertise his shows. The Chevalier Muses The café was the scene of the Charlie Hebdo attack on 7 January 2015. Piano and saxophone player Kevin Watkins was killed during the attack and saxophonist and pianist Albert Leonard was wounded. Watkins was killed on his way to the subway, and Leonard was attacked in the café, suffering severe injuries. Events On 14 December 2009, it was featured as a backdrop in the music video for Sting's "Russian Bombs" off his 2010 album The Last Ship. Use contextual Markup Assist to send feedback to specific pieces of the drawing or complete it. Multi-selection snap points: With the multi-selection snap, you can select multiple points in the drawing. You can also use the multi-selection snap to add lines, arcs, and circles. When you draw these lines and arcs, you can change their width and height. A multi-selection anchor is like a snap point but it also allows you to edit the anchor. You can use it to insert, delete, or reverse-order a line, arc, or circle. Two-color line styles: AutoCAD now supports 2-color line styles. With these 2-color line styles, you can apply the type to lines that meet predefined conditions. For example, you can use the two-color line style to apply the designation of "draft" to lines that are not final. Block and text drawing tools: Use the Block tool to automatically create text and graphics blocks. With the insertion option, you can create blocks that match the width and height of the currently selected drawing object. The insertion option also enables you to create blocks that match your text objects. You can also use the Block tool to automatically create blocks that are based on graphic styles. You can choose to create only blocks based on your existing styles or based on a predefined set of styles. Using the Block tool also gives you additional control over the block creation process. For example, you can use the Block tool to create blocks for the parts of a drawing that you need to create for a particular use case or reference. You can use the text tool to automatically generate text. You can also edit the text that you generate. The text tool works with the modern font format, which improves the display of text in drawings. AutoCAD now supports the Designator library: Use the Designator library to quickly add drawing objects to drawings. Use the Designator library to add lines, arcs, circles, blocks, and text to drawings. You can save your definitions in the Designator library and access them quickly. Drawing-related commands: You can use the command ribbon to create and edit text, blocks, arcs, and lines and edit their properties. Use the command ribbon to set options for
