Software enhancements made in AutoCAD but available on other products include: Dynamic components (AutoCAD 2011) A new type of object in AutoCAD that can be created from, or applied to, any other type of object. For example, a text string can be changed to a custom text component, or a label can be transformed into a custom text component. This feature also allows you to turn several instances of a component into a single component. Dynamic components can include, but are not limited to: text components, graphics components (images, bitmap images, clipart), dimensions, callouts, attributes, and note templates. Dynamic components are defined as a Dynamic Component on the Object > Components > Attributes tab of the Component dialog box. Note that using Dynamic Components in the drawing requires you to do some scripting in AutoCAD. Dynamic components are not related to Customizing Components. Custom camera and custom lens (AutoCAD 2008) A new type of camera that was introduced in AutoCAD 2008 that supports adjusting the field of view, as well as distance, altitude and angle adjustments. Multiple cursor features (AutoCAD 2010) A new feature that allows the user to have up to six simultaneous cursors, each capable of performing different functions such as the movement of a cursor around a current path. Application-level dimensioning (AutoCAD 2010) A new feature that allows the user to enter 2D dimensioning at the application level. This means that dimension lines do not have to be created in a dimensioning session. Customization of the ink styles in Adobe Illustrator (AutoCAD 2011) A new feature that allows the user to customize the ink styles in the Adobe Illustrator program. AutoCAD history AutoCAD history overview On March 6, 1993, Autodesk, Inc. introduced the first version of AutoCAD, 2.0, for the PC. This was a 32-bit version of AutoCAD for DOS. That version, the first to use the 32-bit version of AutoCAD for DOS, introduced the User Interface. This was a revamped version of the 3D Graphics user interface (GUI). The resulting product was not a traditional end-user CAD program, but a CAD/CAM system, requiring a CAD programmer to interface to create data for the drawings. AutoCAD 2.0 included dimensioning, drawing of plans and elevations, AutoLISP programming language for application extension and scripting, G 5b5f913d15

Hybrid feed-forward control for active noise reduction. In this paper, we propose and demonstrate a hybrid feed-forward control scheme for active noise control (ANC) based on a combination of linear predictive model and Kalman filter. The proposed scheme is implemented in a loudspeaker array for ANC. In the system, the model is used to estimate the sound field noise source based on the reflection of the sound field from the array. The controller is designed to suppress the sound field noise source through virtual actuator elements located at the array surface. The theoretical analysis of the system shows that it can significantly suppress the sound field noise in the far-field compared to a single actuator, but can achieve a satisfactory performance in the near-field. The simulation and the experimental results illustrate the effectiveness of the proposed scheme. While attending the Apple WWDC in San Francisco this week, Apple analyst Ming-Chi Kuo shared with MacRumors some of the details that are expected to be revealed later this week about the next generation of Mac Pros and Mac minis. The new Mac Pros will have a hexa-core Intel Xeon processor, but Kuo says that the new Mac minis will come with an AMD processor and will have up to six processor cores. Both new Mac Pros and Mac minis are expected to have Thunderbolt 2 as well as 4K video outputs. “We expect to see the new Mac Pro and the new Mac mini in June (2014). The Mac mini will retain the current configuration with two 2.5 GHz dual-core Intel Xeon processors and a third option will be 4 GB of DDR3L memory for \$1,299,” Kuo wrote. Kuo says that the new Mac Pros will also support the latest Intel platform, “Thunderbolt 3”, which will have a maximum data rate of up to 20 gigabits per second compared to up to 40 gigabits per second on the latest MacBook Pro. Apple has not yet confirmed the availability of the new Mac Pros and Mac minis, but you can expect to hear more about these new machines at the Worldwide Developers Conference.
